Boolean Functions and Computation Models Peter Clote, Evangelos Kranakis, 2013-03-09 The two internationally renowned authors elucidate the structure of fast parallel computation. Its complexity is emphasised through a variety of techniques ranging from finite combinatorics, probability theory and finite group theory to finite model theory and proof theory. Non-uniform computation models are studied in the form of Boolean circuits; uniform ones in a variety of forms. Steps in the investigation of non-deterministic polynomial time are surveyed as is the complexity of various proof systems. Providing a survey of research in the field, the book will benefit advanced undergraduates and graduate students as well as researchers.

Universal Version Bible William Petri, 2018-07-08 Nevi'im (/n_vî i m, n_vî m/; Hebrew: נְבִיאִים. (Nî'im, prophets) is the 2nd main division of the Hebrew Bible (the Tanakh), between the Torah (instruction) and Ketuvim (writings). It contains 2 sub-groups, the Former Prophets (Nevi'im Rishonim נְבִיאִים רִשְׁוֹנִים, the narrative books of Joshua, Judges, Samuel and Kings) and the Latter Prophets (Nevi'im Aharonim נְבִיאִים אַהֲרֹנִים, the books of Isaiah, Jeremiah and Ezekiel and the Twelve Minor Prophets). Many of the writings of the Latter Prophets are thought by scholars to be older than the narratives of the Former Prophets which precede them in the canon, and were profoundly influential on the direction and development of Hebrew religion. The Latter Prophets have also had a wide influence on literature and on political and social activism in cultures outside of Judaism.

Dangerous Flashpoints in East Asia: The Military Build-up Saghir Iqbal,2018-01-16 Major changes in East Asia have placed the region near the top of the World's strategic agenda. East Asia has until recently experienced the fastest regional economic growth rate in the world for many years. Economic co-operation has been flourishing and economic interests have become the major reason in reshaping East Asian international relations. However, there have also been changes in the security environment, due to many factors, such as the reduction of US forces in East Asia, the disintegration of the Soviet Union (the decline of the Soviet Union's presence in the region had led to renewed attention to traditional and potential rivalries among the major East Asian powers), and the concern of China's hegemonistic ambitions.

Bioinorganic Chemistry D.P. Kessissoglou,2012-12-06 Bioinorganic chemistry is primarily concerned with the role of metal atoms in biology and is a very active research field. However, even though such important structures of metalloenzymes are known, as the MoFeCo of nitrogenase, Cu or Mn superoxide dismutase and plastocyanin, the synthetic routes to the modelling of such centers remains a matter of acute scientific interest. Other metalloenzymes, such as the Mn center of the oxygen evolving complex of PSII, are still the focus of in-depth examination, both spectroscopic and structural. Another area of concern is the interaction between drugs and metals and metal ion antagonism. Understanding the chemistry of metal ions in biological systems will bring benefits in terms of understanding such problems as biomineralization and the production of advanced materials by micro-organisms. The 29 contributions to Bioinorganic Chemistry: An Inorganic Perspective of Life give an excellent summary of the state of the art in this field, covering areas from the NMR of paramagnetic molecules to the use of lanthanide porphyrins in artificial batteries.

Food for Thought Peter Walkemeyer,2015-01-23 Food for Thought is a collection of studies or devotions designed to feed the believer and give them something to think about. It takes the reader on a journey through the scriptures, touching on many aspects of the Christian Life. Food for Thought aims to motivate and call forth the best qualities in the reader; to challenge them to a deeper devotion to Christ, greater faith and a life of moral excellence. Food for Thought Book One contains ninety individual studies that can be used as daily devotions, connect group studies, or personal study guides. The studies are designed to feed the reader the Word and stimulate their thinking so that they spend time meditating in the

Word, digesting it and gaining their own revelation. Each daily study uses the basic structure (SOAP): scripture, observation, application, and prayer. In this manner, the reader gets to read a passage or several passages of scripture. They are provided with some commentary on the scripture they have read, the application of the scripture for daily living is expounded, and there is a Word-based prayer that can be used and meditated on during the day.

Mathematics in Berlin Heinrich Begehr, Helmut Koch, Jürg Kramer, Norbert Schappacher, Ernst-Jochen Thiele, 1998-07-21 This little book is conceived as a service to mathematicians attending the 1998 International Congress of Mathematicians in Berlin. It presents a comprehensive, condensed overview of mathematical activity in Berlin, from Leibniz almost to the present day (without, however, including biographies of living mathematicians). Since many towering figures in mathematical history worked in Berlin, most of the chapters of this book are concise biographies. These are held together by a few survey articles presenting the overall development of entire periods of scientific life at Berlin. Overlaps between various chapters and differences in style between the chapters were inevitable, but sometimes this provided opportunities to show different aspects of a single historical event - for instance, the Kronecker-Weierstrass controversy. The book aims at readability rather than scholarly completeness. There are no footnotes, only references to the individual bibliographies of each chapter. Still, we do hope that the texts brought together here, and written by the various authors for this volume, constitute a solid introduction to the history of Berlin mathematics.
